Patio Topside Quick Reference Card

INITIAL START-UP
Your spa will enter Priming Mode (PR) when it is energized. During Priming Mode, press “Jets” button repeatedly and be sure the pump is free of air. Priming Mode lasts less than 5 minutes. Press “Warm” or “Cool” to exit. After Priming Mode, the spa will run in Standard Mode (see Mode section).

TEMP CONTROL
(80°F - 104°F / 26°C - 40°C)
The last measured water temperature is constantly displayed. The water temperature displayed is current only when the pump has been running for at least 1 minute. To display the set temperature, press “Temp” once. To change the set temperature, press the temperature button again before the display stops flashing and hold. The set temperature will begin to rise, release the button at the desired set temperature. To decrease the set temperature, press and hold the “temp” button again and the set temperature will decline, release at the desired set temperature. After three seconds, the display will stop flashing and begin to display the current spa temperature. The spa will then begin heating (or cooling) in order to reach the set temperature that you have selected.

PUMP
Press “Pump” to turn the pump on or off, and to shift between low and high speeds (if equipped). If left running, the pump will turn off after a preset length of time. Low speed may run automatically at times as part of your spas filtration cycles, during which it cannot be deactivated from the panel, however you will still be able to control the high speed setting. The ozone generator (if installed) will activate anytime low speed is running.

AUX (PUMP 2)
If an additional pump or blower is installed. Press “Aux” to turn the device on. If your additional device is a dual speed pump, pressing “Aux” again will activate the pumps high speed. Pressing “Aux” again will turn off the device/pump.

LIGHT
Press “Light” to operate the spa light. Turns off after 4 hours. If your hot tub is equipped with a multicolor lighting package, then pressing the “Light” button consecutively will toggle the lights through different colors modes.

MODE
Mode is changed by pressing “Temp” then “Light”. Press the “Temp” button to toggle through the available modes. Press “Light” to exit programming.

Standard Mode maintains set temperature. “Sr” will be displayed momentarily when you switch into Standard Mode.

Economy Mode heats the spa to the set temperature only during filter cycles. “Ec” will display when water temp is not current, and will alternate with water temp when the pump is running.

Sleep Mode heats the spa to within 20°F/10°C of the set temperature only during filter cycles. “SL” will display when water temp is not current, and will alternate with water temp when the pump is running.

PRESET FILTER CYCLES
The first preset filter cycle begins 6 minutes after the spa is energized. The second preset filter cycle begins 12 hours later. Filter duration is programmable for 1, 2, 3, 4, 5, 6, 7, or 8 hours. The default filter time is 1 hour. To program, press “Temp,” then “Jets.” Press “Temp” to adjust. Press “Jets” to exit programming.

### DIAGNOSTIC MESSAGES

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>PROBABLE CAUSE</th>
<th>RECOMMENDED ACTION</th>
</tr>
</thead>
</table>
| **No message on display.**  
Power has been cut off to the spa. | The control panel will be disabled until power returns. Spa settings will be preserved until next power up. | |
| **Temperature unknown.** | After the pump has been running for 2 minutes, the current water temperature will be displayed. | |
| **HH**  
“Overheat” - The spa has shut down.* One of the sensors has detected 118°F/47.8°C at the heater. | DO NOT ENTER THE WATER. Remove the spa cover and allow water to cool. Once the heater has cooled, reset by pushing any button. If the spa does not reset, shut off the power to the spa and call your dealer for service organization | |
| **OH**  
“Overheat” - The spa has shut down.* One of the sensors has detected that the spa water is 110°F/43.5°C. | DO NOT ENTER THE WATER. Remove the spa cover and allow water to cool. At 107°F/41.7°C, the spa should automatically reset. If spa does not reset, shut off the power to the spa and call your dealer or service organization | |
| **SA**  
Spa is shut down.* The sensor that is plugged into the Sensor “A” jack is not working. | If the problem persists, contact your dealer or service organization. (May appear temporarily in an overheat condition) | |
| **Sb**  
Spa is shut down.* The sensor that is plugged into the Sensor “B” jack is not working. | If the problem persists, contact your dealer or service organization. (May appear temporarily in an overheat condition) | |
| **Sn**  
Sensors are out of balance. If alternating with spa temperature, it may just be a temporary condition. If flashing by itself, spa is shut down. | If the problem persists, contact your dealer or service organization. | |
| **HL**  
A significant difference between temperature sensors has been detected. This could indicate a flow problem. | If the water level is normal, make sure all pumps have been primed. If problem persists contact your dealer or service organization. | |
| **LF**  
Persistent low flow problems. (Displays on the fifth occurrence of message within 24 hours.) Heater is shut down, but other spa functions continue to run normally. | Follow action required for (HFL) message. Heating capability of the spa will now reset automatically. You may press any button to reset. | |
| **dr**  
Possible inadequate water, poor flow, or air bubbles in detected in the heater. Spa is shut down for 15 minutes. | If the water level is normal, make sure all pumps have been primed. If problem persists contact your dealer or service organization. | |
| **dY**  
Inadequate water detected in heater. (Displays on third occurrence of message.) Spa is shut down.* | Follow action required for (dr) message. Spa will not automatically reset. Press any button to reset manually. | |
| **IC**  
“Ice” - Potential freeze condition detected.  
*Even when spa is shut down, some equipment will turn on if freeze protection is needed. | No action required. All equipment will automatically activate regardless of spa status. The equipment stays on 4 minutes after the sensors detect that the spa temperature has risen to 45°F/7.2°C or higher. An optional freeze sensor may be added to protect against extraordinary freeze conditions. Auxiliary freeze sensor protection is advisable for colder climates. See your dealer for details. | |
